

Capturas de ejecución

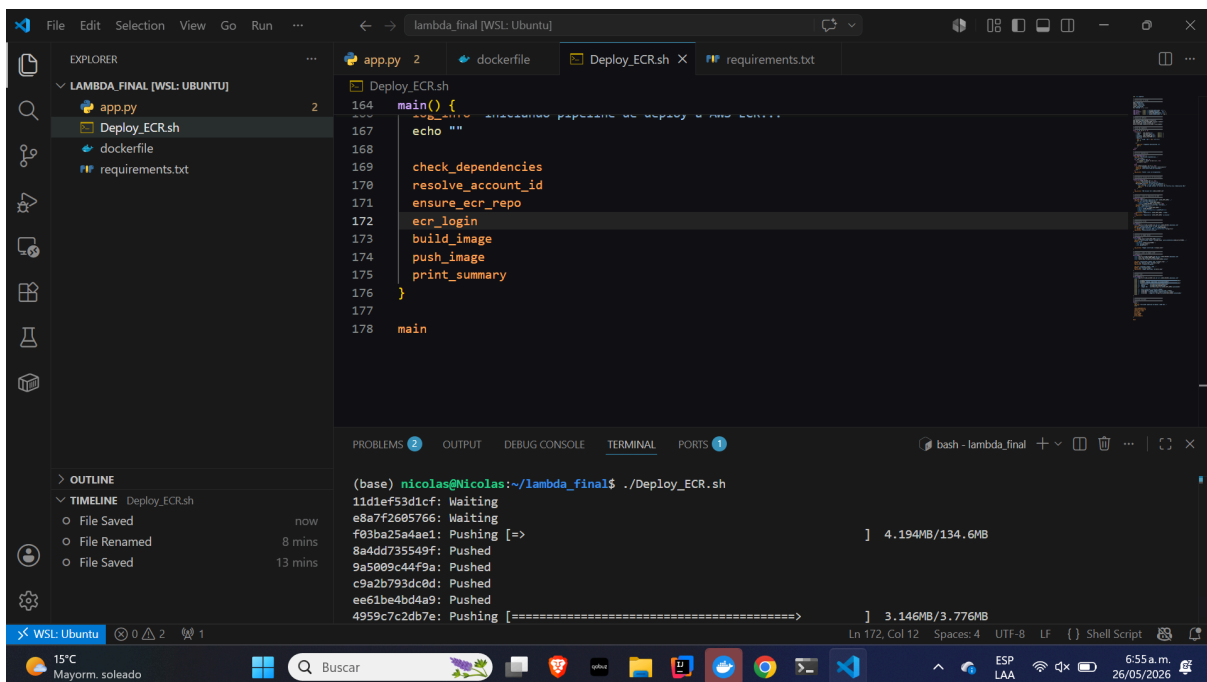

Ejecución del archivo de Bash

This screenshot shows the Visual Studio Code interface with the `Deploy_ECR.sh` script open. The script contains a `main()` function that performs several steps: logging in to ECR, building a Docker image, pushing it to the repository, and printing a summary. The terminal output shows the command `./Deploy_ECR.sh` being executed, resulting in a successful login and the start of image building.

```
main() {  
    echo ""  
  
    check_dependencies  
    resolve_account_id  
    ensure_ecr_repo  
    ecr_login  
    build_image  
    push_image  
    print_summary  
}  
main
```

```
(base) nicolas@nicolas:~/lambda_final$ ./Deploy_ECR.sh  
Login Succeeded  
[OK] Autenticación exitosa.  
[INFO] Construyendo imagen 'fastapi-lambda:latest' para plataforma linux/amd64...  
[+] Building 9.1s (1/2)                                docker:default  
=> [internal] load build definition from dockerfile      0.9s  
=> => transferring dockerfile: 254B                      0.1s  
=> [internal] load metadata for public.ecr.aws/lambda/python:3.11 8.1s
```

This screenshot shows the same Visual Studio Code interface, but the terminal output has progressed further. It shows the Docker image being pushed to the ECR repository, with progress bars indicating the upload of layers.

```
(base) nicolas@nicolas:~/lambda_final$ ./Deploy_ECR.sh
